

IN THE CLAIMS

Please amend the claims as follows:

1 –12. (Canceled)

13. (Currently Amended) ~~An article of manufacture~~ A computer program product, comprising:

~~a computer usable medium~~ computer-readable memory device;

~~a set of computer operating instructions embodied~~ computer-readable program code segments, stored on the medium, including instructions for a method of displaying dynamic page content in a page-caching browser capable of loading pages for display from a cache, comprising instructions for:

~~specifying an address to a page stored at a source;~~

~~_____ at a browser application, inserting a unique identifier into~~

~~_____ the address, the unique identifier being unique for each request of the page by the browser application, the unique identifier preventing the browser application from loading the page from the cache; and~~

~~_____ from the browser application, transmitting a request with the address and the unique identifier to retrieve the stored page from the source regardless of whether the browser application is configured to load pages from the cache.~~

~~receiving, at a client having a local cache, input related to a request for content of a web page, the request including an address for the web page;~~

~~in response to receiving the input:~~

~~determining, at the client, whether there is content associated with the web page in the local cache;~~

~~if there is content associated with the web page in the local cache, inserting a unique identifier into the address; and~~

~~transmitting the request to a server.~~

14. (Currently Amended) ~~The article~~ computer program product of claim 13, ~~wherein the instructions define the address to include a Universal Resource Locator (URL) to content of at least a portion of a web page~~ further comprising:

computer-readable program code segments, stored on the medium, for determining whether the received input comprises either an event requesting a currently-displayed web page to be refreshed or an event requesting navigation to a previously-displayed web page.

15 - 29. (Canceled)

30. (Currently Amended) ~~An article of manufacture~~ A computer program product, comprising:

~~a computer usable medium~~ computer-readable memory device;

~~a set of computer operating instructions embodied~~ computer-readable program code segments, stored on the medium, including instructions for a method of displaying dynamic page content in a page-caching browser capable of loading pages for display from a cache, comprising instructions for:

~~specifying an address to a page stored at a server, where the page content is dynamically based on a state associated with a browser session;~~

~~at a browser application in response to a navigation event, inserting a unique identifier into the address, the unique identifier being unique for each navigation to the page by the browser application; and~~

~~from the browser application, executing a function with the address and the unique identifier to cause the stored page to be loaded from the server regardless of whether the browser application is configured to load pages from the cache~~

receiving, from a client having a local cache, a request for content of a first web page, the request including a first address, the request also including a request for transmission of a second web page; and

in response to receiving the request for content

transmitting a message redirecting the client to the second web page, the message including a second address with a unique identifier.

31. (New) The computer program product of Claim 30, further comprising:

computer-readable program code segments, stored on the medium, for receiving, from the client, a request for content of the second web page, the request including the second address with the unique identifier.

32. (New) A method, comprising:
- receiving, at a client having a local cache, input related to a request for content of a web page, the request including an address for the web page;
 - in response to receiving the input:
 - determining, at the client, whether there is content associated with the web page in the local cache;
 - if there is content associated with the web page in the local cache, inserting a unique identifier into the address; and
 - transmitting the request to a server.
33. (New) The method Claim 32, wherein determining whether there is content associated with the web page in the local cache comprises:
- determining whether the received input comprises either an event requesting a currently-displayed web page to be refreshed or an event requesting navigation to a previously-displayed web page.
34. (New) A method comprising:
- receiving, from a client having a local cache, a request for content of a first web page, the request including a first address, the request also including a request for transmission of a second web page; and
 - in response to receiving the request for content:
 - transmitting a message redirecting the client to the second web page, the message including a second address with a unique identifier.
35. (New) A method according to Claim 34 further comprising:
- receiving, from the client, a request for content of the second web page, the request including the second address with the unique identifier.
